

SIMATS ENGINEERING

Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Student Name: Kaviya.G

Reg. No :192524281

Course Code: CSA0596

Slot: D

Course Name: Database Management System for relational database

Course Faculty: Dr.M.Manikandan, Dr.Jeena R

Project Title: SMART HOME ENERGY MONITOR

Module-1: usage analytics

Module Photographs:

Project Description:

Usage analytics is the process of systematically collecting, measuring, and interpreting data about how users interact with an application, system, or service to understand real usage patterns and improve overall performance. It includes tracking metrics such as active users, session duration, feature utilization, user navigation paths, load times, and error occurrences to gain deeper insights into both user behavior and system efficiency. By analyzing this data, organizations can identify usage trends, detect underperforming features, optimize resource allocation, strengthen system reliability, and enhance the overall user experience. Usage analytics also helps in informed decision-making for future updates, improving customer satisfaction, increasing retention, and ensuring that the system continues to meet user needs effectively and efficiently.
